

Key Economic Overview 2021

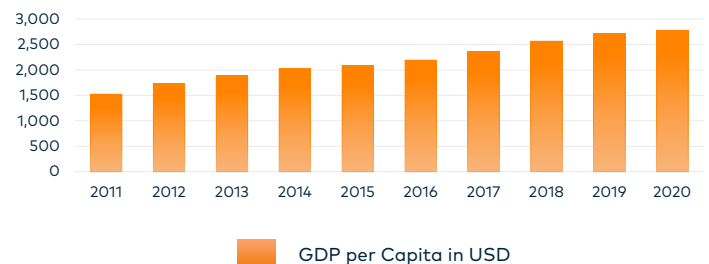

For Vietnam

The global effects of COVID-19 are no doubt significant, with long term systemic impacts that are difficult to predict. Vietnam however, due to a swift response in the initial stage of the crisis, has managed to position itself as an exception, managing the pandemic with relative success. Consequently, although the economy has been affected by the COVID-19 crisis, Vietnam has performed well in comparison to the rest of the world, as GDP has continued to expand and FDI inflows reached close to US\$29 billion during 2020.
